

MATH 594. HOMEWORK 4 (DUE FEBRUARY 5)

**Book problems:** In §4.5, read pp. 146–7 and then do Exercises 6,7, 13, 25. In §5.5, read pp. 184–6, then do Exercises 6–9.

1. Let  $G$  be a finite  $p$ -group.

(i) For every proper subgroup  $H$  in  $G$ , show that  $H$  is a proper subgroup of its normalizer.

(ii) Deduce that there exists a solvability series for  $G$  in which one of the terms is actually  $H$ .

(iii) Give an example of a non-trivial quotient situation  $G/H$  for which there does not exist a subgroup  $K$  in  $G$  with  $K \rightarrow G/H$  an isomorphism (concretely, we can't "lift"  $G/H$  as a group back into  $G$ ). Hint: think of cyclic groups.
