- ❖ Convergence in probability
- ❖ Back to the Basel problem

$$\frac{1}{1^2} + \frac{1}{2^2} + \frac{1}{3^2} + \frac{1}{4^2} + \dots = \frac{\pi^2}{6}$$

- Proposed by Mengoli in 1644
- Baffled many brilliant minds including the Bernoulli family, Goldbach, Leibniz, and De Moivre for a century
- Solved by Euler in 1735

Counting problem

Problem: Given a population with N items with some colored red, how many red ones are there?

Oracle formulation: For $x = 1, 2, \dots, N$,

$$f(x) = \begin{cases} 1, & \text{if } x = m_1, m_2, m_3, \dots, m_t; \\ 0, & \text{otherwise.} \end{cases}$$

Find the number t by evaluations of f (oracle calls).

Classical proportion estimation method

Classical proportion estimation method

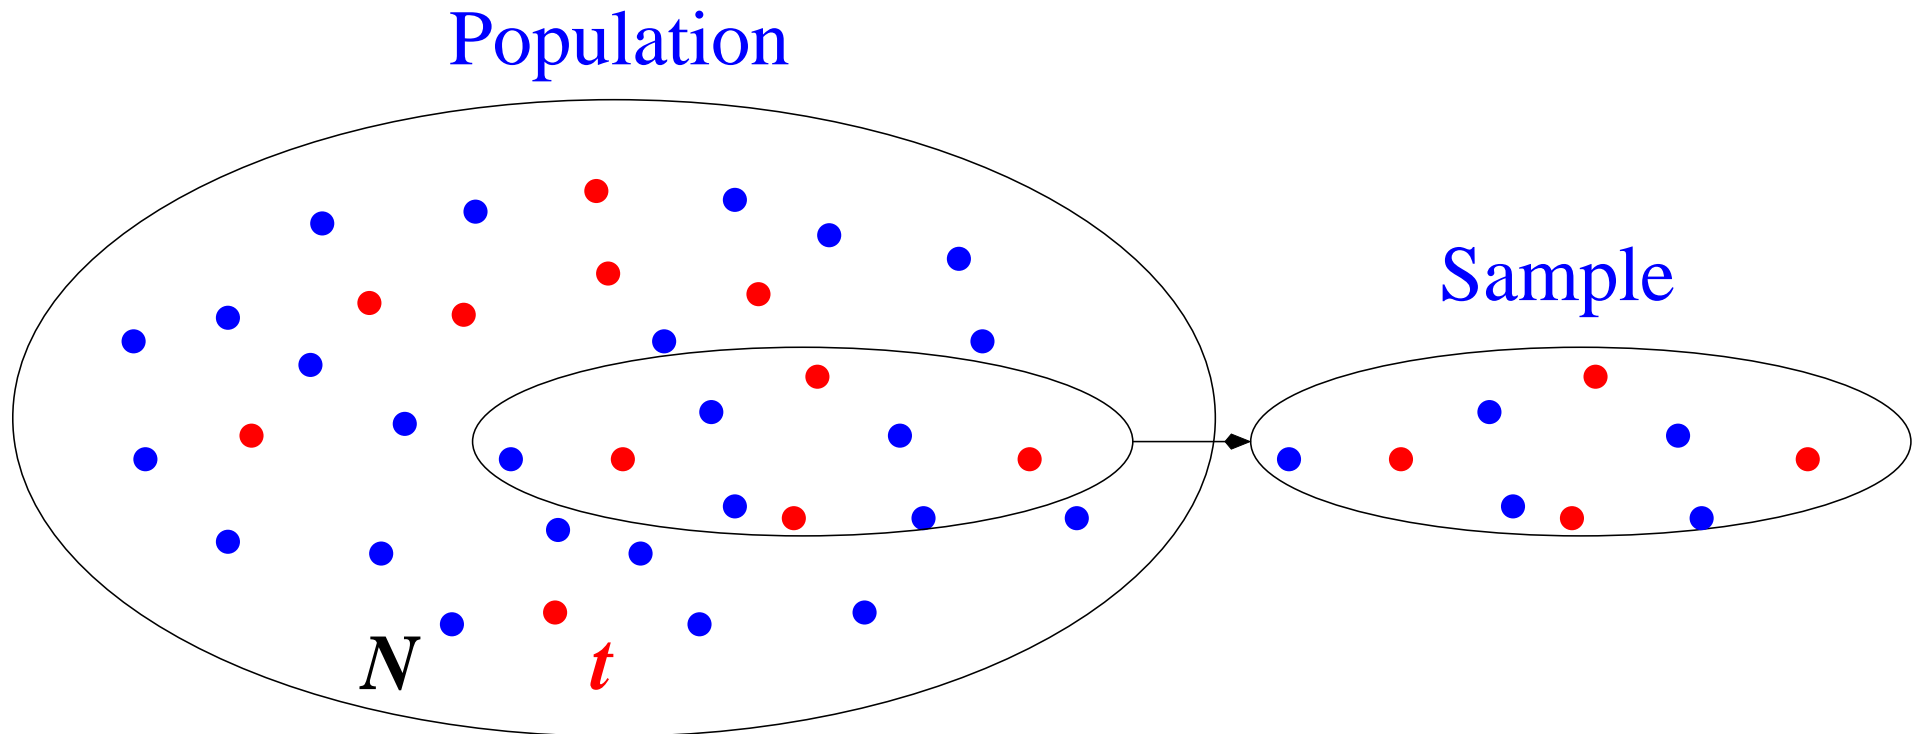

$$\text{Finding } t \Leftrightarrow \text{Finding } p = \frac{t}{N}$$

Population

Classical proportion estimation method

$$\text{Finding } t \Leftrightarrow \text{Finding } p = \frac{t}{N}$$

Draw a sample. Use the sample proportion \hat{p} to estimate p .

Classical proportion estimation method

$$\text{Finding } t \Leftrightarrow \text{Finding } p = \frac{t}{N}$$

Draw a sample. Use the sample proportion \hat{p} to estimate p .

How would a quantum computer do this?

Finding a needle in a haystack

Problem: Given an unsorted database with N items with one colored red, how to find the red one?

Oracle formulation:

$$f(x) = \begin{cases} 1 & \text{if } x = m \\ 0 & \text{if } x \neq m \end{cases}, \quad x = 1, 2, \dots, N.$$

Find m by evaluations of f .

- ❖ Convergence in probability
- ❖ Back to the Basel problem

1. Prepare the initial state vector $|s\rangle = \frac{1}{\sqrt{N}} \sum_{x=1}^N |x\rangle$.
2. Apply **amplitude amplification operator** $G = \mathcal{I}_s \mathcal{I}_f$ on $|s\rangle$ for approximately $\frac{\pi}{4} \sqrt{N}$ times.
 - Selective sign flipping operator
$$\mathcal{I}_f |x\rangle = (-1)^{f(x)} |x\rangle = \begin{cases} -|x\rangle, & \text{if } f(x) = 1 \\ |x\rangle, & \text{if } f(x) = 0 \end{cases}$$
 - Inversion around the average operator
$$\mathcal{I}_s = 2|s\rangle\langle s| - \mathbb{I}$$
3. Measure.

Amplitude Amplification Operator

$$f(x) = 1 \leftrightarrow |m\rangle$$
$$f(x) = 0 \leftrightarrow |w\rangle = \frac{1}{\sqrt{N-1}} \sum_{x \neq m} |x\rangle$$

Under basis $\{|w\rangle, |m\rangle\}$

$$G = \begin{bmatrix} \cos 2\theta & -\sin 2\theta \\ \sin 2\theta & \cos 2\theta \end{bmatrix}$$

$$\sin \theta = \langle s|m\rangle = \sqrt{\frac{t}{N}} = \sqrt{p}$$

G has eigenvectors of $|\psi_+\rangle$ and $|\psi_-\rangle$ with eigenvalues $e^{2\theta i}$ and $e^{-2\theta i}$, respectively.

QFT and inverse QFT

For $x, y \in \{0, 1, 2, \dots, M - 1\}$,

$$QFT : |x\rangle \rightarrow \frac{1}{\sqrt{M}} \sum_{y=0}^{M-1} e^{2\pi i \frac{x}{M} y} |y\rangle,$$

$$QFT^{-1} : |x\rangle \rightarrow \frac{1}{\sqrt{M}} \sum_{y=0}^{M-1} e^{-2\pi i \frac{x}{M} y} |y\rangle.$$

- ❖ Back to the Basel problem

$$|s\rangle = \cos \pi\omega |w\rangle + \sin \pi\omega |m\rangle$$

$$\Downarrow (G^y)$$

$$G^y |s\rangle = \frac{e^{i\pi\omega}}{\sqrt{2}} e^{2\pi i\omega y} |\psi_+\rangle + \frac{e^{-i\pi\omega}}{\sqrt{2}} e^{-2\pi i\omega y} |\psi_-\rangle$$

$$\Downarrow (\text{A procedure to manufacture superpositions})$$

$$\frac{1}{\sqrt{M}} \sum e^{2\pi i\omega y} |y\rangle$$

$$\Downarrow (QFT^{-1})$$

$$\tilde{\omega}$$

Output: $\tilde{p} = \sin^2(\pi\tilde{\omega}) \approx \sin^2 \pi\omega = p$

Algorithm

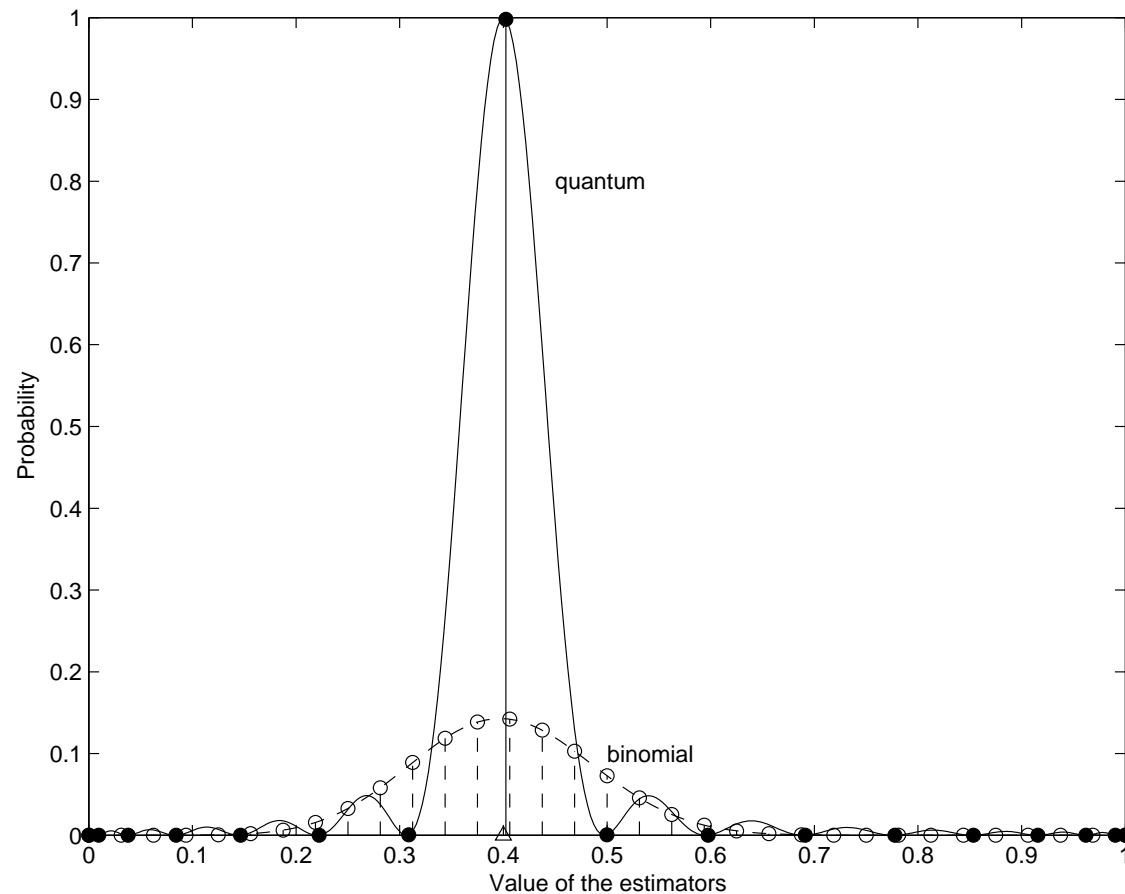

1. Prepare two registers in initial state $|\psi_0\rangle = \frac{1}{\sqrt{M}} \sum_{y=0}^{M-1} |y\rangle|s\rangle$.
2. Apply C_F on $|\psi_0\rangle$, which implements $|y\rangle|s\rangle \rightarrow |y\rangle G^y|s\rangle$.
3. Apply QFT^{-1} on the first register.
4. Measure the first register to obtain $|x\rangle$ and output $\tilde{p} = \sin^2(\pi \frac{x}{M})$.

Probability distribution of \tilde{p}

$$P \left[\tilde{p} = \sin^2 \left(\frac{\pi x}{M} \right) \right] = \frac{\sin^2 M\theta}{M^2 \sin^2 \left(\theta - \frac{\pi x}{M} \right)}, \text{ where } \theta = \sin^{-1} \sqrt{p}.$$

$p = 0.4$: $N = 100$, $t = 40$, and $M = 32$.

Convergence in probability

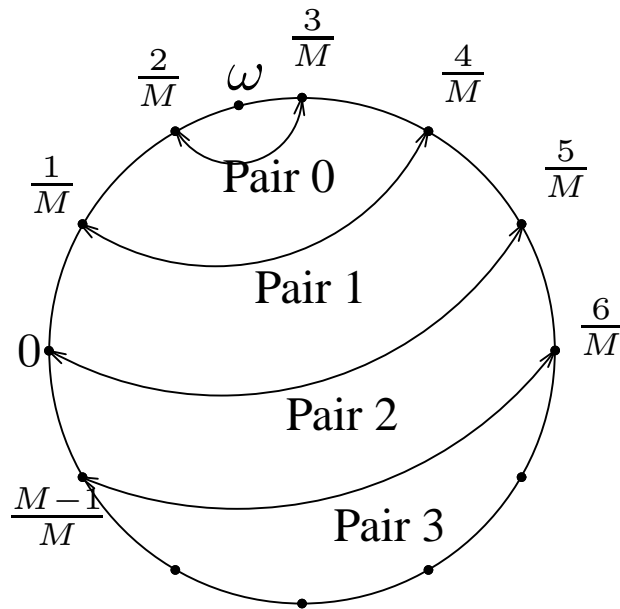

Theorem 2. *As $M \rightarrow \infty$, $\tilde{p} \rightarrow p$ in probability.*

- ❖ Convergence in probability
- ❖ Back to the Basel problem

Convergence in probability

Theorem 2. As $M \rightarrow \infty$, $\tilde{p} \rightarrow p$ in probability.

Proof.

$$\begin{aligned} & \lim_{M \rightarrow \infty} P(|\tilde{p} - p| < \epsilon) \\ & \geq \frac{8}{\pi^2} \left(1 + \frac{1}{3^2} + \frac{1}{5^2} + \dots \right) \\ & = \frac{8}{\pi^2} \cdot \frac{\pi^2}{8} = 1. \end{aligned}$$

□

- ❖ The Basel Problem
- ❖ Counting problem
- ❖ Classical method
- ❖ Finding a needle in a haystack
- ❖ Grover's algorithm
- ❖ Amplitude Amplification Operator
- ❖ QFT
- ❖ Frequency estimation via QFT
- ❖ Road map
- ❖ Algorithm
- ❖ Probability distribution of \tilde{p}
- ❖ Convergence in probability
- ❖ Back to the Basel problem

Back to the Basel problem

$$\sum_{x=0}^{M-1} P \left[\tilde{p} = \sin^2 \left(\frac{\pi x}{M} \right) \right] = \sum_{x=0}^{M-1} \frac{\sin^2 M\theta}{M^2 \sin^2 \left(\theta - \frac{\pi x}{M} \right)} = 1$$

Back to the Basel problem

$$\sum_{x=0}^{M-1} P \left[\tilde{p} = \sin^2 \left(\frac{\pi x}{M} \right) \right] = \sum_{x=0}^{M-1} \frac{\sin^2 M\theta}{M^2 \sin^2 \left(\theta - \frac{\pi x}{M} \right)} = 1$$

- Set $\theta = \frac{\pi}{2M}$:

$$\frac{2}{M^2} \left(\frac{1}{\sin^2 \frac{\pi}{2M}} + \frac{1}{\sin^2 \frac{3\pi}{2M}} + \frac{1}{\sin^2 \frac{5\pi}{2M}} + \cdots + \frac{1}{\sin^2 \frac{(M-1)\pi}{2M}} \right) = 1$$

Back to the Basel problem

$$\sum_{x=0}^{M-1} P \left[\tilde{p} = \sin^2 \left(\frac{\pi x}{M} \right) \right] = \sum_{x=0}^{M-1} \frac{\sin^2 M\theta}{M^2 \sin^2 \left(\theta - \frac{\pi x}{M} \right)} = 1$$

- Set $\theta = \frac{\pi}{2M}$:

$$\frac{2}{M^2} \left(\frac{1}{\sin^2 \frac{\pi}{2M}} + \frac{1}{\sin^2 \frac{3\pi}{2M}} + \frac{1}{\sin^2 \frac{5\pi}{2M}} + \cdots + \frac{1}{\sin^2 \frac{(M-1)\pi}{2M}} \right) = 1$$

- Apply inequality $\cot^2 \alpha < \frac{1}{\alpha^2} < \csc^2 \alpha$, and then let $M \rightarrow \infty$:

$$1 + \frac{1}{3^2} + \frac{1}{5^2} + \cdots = \frac{\pi^2}{8}.$$
