

Evaluating Science in the Media

This week's assignment is a little different to the previous ones. Focus only on the *highlighted* text in the attached document. You do not need to summarize any information this time. Pages 1-3 are taken from the World Cancer Research Fund's 600+ page official report. Pages 4-5 are the corresponding press release. Page 6 is from a brochure released by the WCRF to highlight its recommendations. Compare and contrast the information presented in each of these documents. Do they agree with each other? Does the information in the report clearly justify the recommendation to not eat processed meat? (hint: is the increase in risk of cancer specified?) Conclude with a couple of sentences comparing these documents to the news articles.
