# Reduction to $B$ -smooth primes

Probabilistic  
Algorithms  
Related to  
RSA

J. David  
Taylor

Index Calculus

Goldwasser-  
Micali

We will compute  $h \cdot g^{-k} \pmod p$  for  $k \geq 1$  until we hit a  $B$ -smooth residue.

The factorization

$$h \cdot g^{-k} = \prod_{\ell \leq B} \ell^{e_\ell}$$

implies that

$$\log(h) \equiv k + \sum_{\ell \leq B} e_\ell \log(\ell) \pmod{p-1}$$

# Reduction to $B$ -smooth primes

Probabilistic  
Algorithms  
Related to  
RSA

J. David  
Taylor

Index Calculus

Goldwasser-  
Micali

We will compute  $h \cdot g^{-k} \pmod p$  for  $k \geq 1$  until we hit a  $B$ -smooth residue.

The factorization

$$h \cdot g^{-k} = \prod_{\ell \leq B} \ell^{e_\ell}$$

implies that

$$\log(h) \equiv k + \sum_{\ell \leq B} e_\ell \log(\ell) \pmod{p-1}$$

Now we need a method to calculate  $\log(\ell)$  for all  $B$ -smooth primes  $\ell$ .

# Finding $\log(\ell)$

- 1 Pick random  $i \in \{1, \dots, p - 1\}$ .

# Finding $\log(\ell)$

- 1 Pick random  $i \in \{1, \dots, p-1\}$ .
- 2 Define  $g_i$  as the least positive residue of  $g^i \pmod p$ .

# Finding $\log(\ell)$

- 1 Pick random  $i \in \{1, \dots, p-1\}$ .
- 2 Define  $g_i$  as the least positive residue of  $g^i \pmod p$ .
- 3 Keep  $g_i$ , if it is  $B$ -smooth.

# Finding $\log(\ell)$

- 1 Pick random  $i \in \{1, \dots, p-1\}$ .
- 2 Define  $g_i$  as the least positive residue of  $g^i \pmod p$ .
- 3 Keep  $g_i$ , if it is  $B$ -smooth.
- 4 Factor  $g_i = \prod_{\ell \leq B} \ell^{u_\ell(i)}$

# Finding $\log(\ell)$

- 1 Pick random  $i \in \{1, \dots, p-1\}$ .
- 2 Define  $g_i$  as the least positive residue of  $g^i \pmod p$ .
- 3 Keep  $g_i$ , if it is  $B$ -smooth.
- 4 Factor  $g_i = \prod_{\ell \leq B} \ell^{u_\ell(i)}$

Note that

$$i \equiv \sum_{\ell \leq B} u_\ell(i) \log(\ell) \pmod{p-1}.$$

# Finding $\log(\ell)$

- 1 Pick random  $i \in \{1, \dots, p-1\}$ .
- 2 Define  $g_i$  as the least positive residue of  $g^i \pmod{p}$ .
- 3 Keep  $g_i$ , if it is  $B$ -smooth.
- 4 Factor  $g_i = \prod_{\ell \leq B} \ell^{u_\ell(i)}$

Note that

$$i \equiv \sum_{\ell \leq B} u_\ell(i) \log(\ell) \pmod{p-1}.$$

Get more than  $\pi(B)$ -equations for an overdetermined system mod  $p-1$ .

# Finding $\log(\ell)$

- 1 Pick random  $i \in \{1, \dots, p-1\}$ .
- 2 Define  $g_i$  as the least positive residue of  $g^i \pmod{p}$ .
- 3 Keep  $g_i$ , if it is  $B$ -smooth.
- 4 Factor  $g_i = \prod_{\ell \leq B} \ell^{u_\ell(i)}$

Note that

$$i \equiv \sum_{\ell \leq B} u_\ell(i) \log(\ell) \pmod{p-1}.$$

Get more than  $\pi(B)$ -equations for an overdetermined system mod  $p-1$ .

Use the Chinese remainder theorem to solve the resulting system.

# Index Calculus Example (Taken from HPS)

RSA

J. David  
Taylor

Index Calculus

Goldwasser-  
Micali

Let's solve

$$37^x \equiv 211 \pmod{18443}.$$

Note that  $p = 18443$  is a prime with primitive root  $g = 37$ .

# Index Calculus Example (Taken from HPS)

Probabilistic  
Algorithms  
Related to  
RSA

J. David  
Taylor

Index Calculus

Goldwasser-  
Micali

Let's solve

$$37^x \equiv 211 \pmod{18443}.$$

Note that  $p = 18443$  is a prime with primitive root  $g = 37$ .

Take  $B = 5$ , so the smooth primes are 2, 3, 5.

# Index Calculus Example (Taken from HPS)

Pick random powers to get

$$\begin{aligned}g^{12708} &\equiv 2^3 \cdot 3^4 \cdot 5 \pmod{p}, & g^{11311} &\equiv 2^3 \cdot 5^2 \pmod{p} \\g^{15400} &\equiv 2^3 \cdot 3^3 \cdot 5 \pmod{p}, & g^{2731} &\equiv 2^3 \cdot 3 \cdot 5^4 \pmod{p}\end{aligned}$$

# Index Calculus Example (Taken from HPS)

Pick random powers to get

$$\begin{aligned}g^{12708} &\equiv 2^3 \cdot 3^4 \cdot 5 \pmod{p}, & g^{11311} &\equiv 2^3 \cdot 5^2 \pmod{p} \\g^{15400} &\equiv 2^3 \cdot 3^3 \cdot 5 \pmod{p}, & g^{2731} &\equiv 2^3 \cdot 3 \cdot 5^4 \pmod{p}\end{aligned}$$

Convert this to the linear system  $\pmod{p-1}$ :

$$12708 \equiv 3x_2 + 4x_3 + x_5$$

$$11311 \equiv 3x_2 + 0x_3 + 2x_5$$

$$15400 \equiv 3x_2 + 3x_3 + x_5$$

$$2731 \equiv 3x_2 + x_3 + 4x_5$$

# Index Calculus Example (Taken from HPS)

RSA

J. David  
Taylor

Index Calculus

Goldwasser-  
Micali

Let  $p$  be a prime number and let  $a$  be an integer prime to  $p$ .

We say that  $a$  is a quadratic residue mod  $p$  iff  $a$  is a square mod  $p$ .

# Quadratic Residues

Probabilistic  
Algorithms  
Related to  
RSA

J. David  
Taylor

Index Calculus

Goldwasser-  
Micali

Let  $p$  be a prime number and let  $a$  be an integer prime to  $p$ .

We say that  $a$  is a quadratic residue mod  $p$  iff  $a$  is a square mod  $p$ .

We say that  $a$  is a quadratic non-residue mod  $p$  iff  $a$  is not a square mod  $p$ .

# Quadratic Residues

Probabilistic  
Algorithms  
Related to  
RSA

J. David  
Taylor

Index Calculus

Goldwasser-  
Micali

Let  $p$  be a prime number and let  $a$  be an integer prime to  $p$ .

We say that  $a$  is a quadratic residue mod  $p$  iff  $a$  is a square mod  $p$ .

We say that  $a$  is a quadratic non-residue mod  $p$  iff  $a$  is not a square mod  $p$ .

Quadratic residues and non-residues multiply with standard parity (e.g. like sums of even or odd numbers).

# The Legendre Symbol

Probabilistic  
Algorithms  
Related to  
RSA

J. David  
Taylor

Index Calculus

Goldwasser-  
Micali

The Legendre Symbol is defined by

$$\left(\frac{a}{p}\right) = \begin{cases} 0 & \text{if } p|a \\ 1 & \text{if } a \text{ is a quadratic residue mod } p \\ -1 & \text{otherwise} \end{cases}$$

# The Legendre Symbol

Probabilistic  
Algorithms  
Related to  
RSA

J. David  
Taylor

Index Calculus

Goldwasser-  
Micali

The Legendre Symbol is defined by

$$\left(\frac{a}{p}\right) = \begin{cases} 0 & \text{if } p|a \\ 1 & \text{if } a \text{ is a quadratic residue mod } p \\ -1 & \text{otherwise} \end{cases}$$

The Legendre symbol is multiplicative:

$$\text{if } \gcd(m, n) = 1, \text{ then } \left(\frac{mn}{p}\right) = \left(\frac{m}{p}\right) \left(\frac{n}{p}\right).$$

# Quadratic Reciprocity

Let  $p, q$  be an odd primes. Here is the Law of Quadratic Reciprocity:

$$\left(\frac{-1}{p}\right) = \begin{cases} 1 & \text{if } p \equiv 1 \pmod{4} \\ -1 & \text{if } p \equiv 3 \pmod{4} \end{cases}$$

# Quadratic Reciprocity

Let  $p, q$  be an odd primes. Here is the Law of Quadratic Reciprocity:

$$\left(\frac{-1}{p}\right) = \begin{cases} 1 & \text{if } p \equiv 1 \pmod{4} \\ -1 & \text{if } p \equiv 3 \pmod{4} \end{cases}$$

$$\left(\frac{2}{p}\right) = \begin{cases} 1 & \text{if } p \equiv 1, 7 \pmod{8} \\ -1 & \text{if } p \equiv 3, 5 \pmod{8} \end{cases}$$

# Quadratic Reciprocity

Let  $p, q$  be an odd primes. Here is the Law of Quadratic Reciprocity:

$$\left(\frac{-1}{p}\right) = \begin{cases} 1 & \text{if } p \equiv 1 \pmod{4} \\ -1 & \text{if } p \equiv 3 \pmod{4} \end{cases}$$

$$\left(\frac{2}{p}\right) = \begin{cases} 1 & \text{if } p \equiv 1, 7 \pmod{8} \\ -1 & \text{if } p \equiv 3, 5 \pmod{8} \end{cases}$$

$$\left(\frac{p}{q}\right) = \begin{cases} \left(\frac{q}{p}\right) & \text{if } p \equiv 1 \pmod{4} \text{ or } q \equiv 1 \pmod{4} \\ -\left(\frac{q}{p}\right) & \text{otherwise} \end{cases}$$

# Quadratic Reciprocity

Let  $p, q$  be an odd primes. Here is the Law of Quadratic Reciprocity:

$$\left(\frac{-1}{p}\right) = \begin{cases} 1 & \text{if } p \equiv 1 \pmod{4} \\ -1 & \text{if } p \equiv 3 \pmod{4} \end{cases}$$

$$\left(\frac{2}{p}\right) = \begin{cases} 1 & \text{if } p \equiv 1, 7 \pmod{8} \\ -1 & \text{if } p \equiv 3, 5 \pmod{8} \end{cases}$$

$$\left(\frac{p}{q}\right) = \begin{cases} \left(\frac{q}{p}\right) & \text{if } p \equiv 1 \pmod{4} \text{ or } q \equiv 1 \pmod{4} \\ -\left(\frac{q}{p}\right) & \text{otherwise} \end{cases}$$

# Quadratic Reciprocity Example

Here's an example of Quadratic Reciprocity in Practice:

$$\begin{aligned}\left(\frac{-15750}{37907}\right) &= \left(\frac{-1}{37907}\right) \left(\frac{15750}{37907}\right) \\ &= (-1) \left(\frac{2 \cdot 3^2 \cdot 5^3 \cdot 7}{37907}\right) \\ &= - \left(\frac{2}{37907}\right) \left(\frac{5}{37907}\right) \left(\frac{7}{37907}\right) \\ &= (-1)^2 \left(\frac{37907}{5}\right) (-1) \left(\frac{37907}{7}\right) \\ &= - \left(\frac{2}{5}\right) \left(\frac{2}{7}\right) \\ &= (-1)(-1)(1) \\ &= 1\end{aligned}$$
